Harald Tilgner, Ryder Lake

On comments to The Standing Committee on Finance, House of Commons, Ottawa.

Whereas "health care" in Canada is rapidly becoming too expensive in large part because it is really SICKNESS CARE, and

Whereas there are lobbies interested in only giving lip service to health care but in reality promote disease as an ever growing source of income to pharma and the rest of the medical establishment,

Be it resolved, that a new medical paradigm be embraced, which would lower "health care" cost by at least 80%!

For example a Cure for Cancer has been discovered since 1981, but this knowledge is being suppressed in the self serving interest of cancer societies worldwide.
